

Tripod Head Quick Release System

Please note that the TQR-3S Quick Release will only work with the KES TQR-MPS (2") Adapter Plate. If the TQR-MPL (2.5") Adapter Plate is used, it will make contact with the Quick Release Tightening Knob, not allowing you to tighten your equipment.

Part # TQR-3S

1. Screw the Tripod Quick Release assembly onto the tripod.

2. Insert the Tripod Quick Release Locking Screw (located in the clear bag with the blue sticker) and fully tighten down the screw. This will prevent rotation of the Tripod Head Quick Release.

3. Take the Tripod Head Quick Release Plate and the enclosed $\frac{3}{8}$ " button head screw and fully tighten down on the tripod head.

4. Now take the enclosed $\frac{1}{4}$ -20 Cone Point Lock Screw and place in the desired mounting hole. (This plate offers two threaded holes to choose from.)

5. This is what your complete assembly will look like.
