

Quick Release System for the Manfrotto MVH 502 Fluid Video Head

Part # MVH502-BQR

1. Take enclosed $\frac{1}{2}$ hex wrench (C) and remove the quick release from bridge platform.

2. Start by fully locking the fluid head lock knob and fluid drag knob. Now take enclosed 4MM hex wrench (B) and remove the 4 hex screws holding the original Manfrotto bridge.

3. With the 4 screws removed, gently lift the original Manfrotto bridge and remove as shown in Photo 3 A. After the original bridge is removed, now remove the locking pivot and push button locking tab as shown in Photo 3B. **Please note, please keep the original fluid head lock knob and fluid drag knob in the locked position.**

4. Shown in this photo, is everything that should have been removed in steps 2 and 3.

5. Take the replacement bridge and locate front and back as marked on the replacement bridge.

6. Take the replacement bridge and re-install the 4 hex screws that were removed in Step 2 with the 4MM hex wrench. **Please note: Still keep the Manfrotto Fluid head lock knob and drag knob in the locked position. Make sure that the replacement bridge has the front to the front and the back to the back.**

7.
(7A) Loosen the fluid head lock knob and drag knob fully.
(7B) Re-check the 4 hex screws to see if they are fully tightened
(7C) Reinstall the quick release using $\frac{1}{2}$ wrench (C) and reinstall the wrench in the quick release for storage.
